CLIP-IN SILENCE™ SYSTEMS

No caulking required
Sound-insulated fully-glazed wall

Are you looking for a glass wall system that offers clear glass, acoustical dampening and flexible system configurations?
CLIP-IN SILENCE™ SYSTEMS combines all of these desirable features.

Walls

CLIP-IN SILENCE™ SYSTEMS uses SGG STADIP SILENCE®, which is laminated glass using an acoustic interlayer PVB (SI). The acoustic interlayer has no effect on the translucence of the glass. The laminated glass is impact resistant to prevent people from falling through the assembly. The walls have been tested up to a noise reduction level of 60dB the equivalent to an STC rating of 60.

Doors

SILENCE DOOR™ SYSTEMS is the collective name for these soundproof door systems, which can be used in soundproof walls without noise leaks. This product range includes both hinging and pivoting doors. The doors have been tested by TNO and Peutz up to RW values of 32dB to 47dB.

PROJECT	MCE Tennet - Arnhem
PRODUCT	wall - SYSTEMS CLIP-IN SILENCE 1338™ + CURVED, door - SYSTEMS SILENCE DOOR PC1337™
ARCHITECT	Studio Groen+Schild - Deventer

NO CAULKING REQUIRED!

Details below display the structural connections for the CLICK25™ system. CLICK25™ is an optional aluminum section that can be installed without the use of caulking. CLICK25™ innovative Glass coupler allows the vertical glass joint to be glazed with out the use of caulking. The CLICK25™ section is available in natural anodized aluminum (EV1), in stainless steel-look or in the client's preferred RAL color. The glass couplers can be supplied in 3 models: CLIP-IN X-profile™ for straight couplings, CLIP-IN T-profile™ for panels positioned at right angles to the wall, and CLIP-IN H-profile™ for a 90 degree angled structure.

SILENCE DOOR SYSTEMS

PC1032™ / PC1135™ / PC1337™

SILENCE DOOR SYSTEMS PC1032™ / PC1135™ / PC1337™

This soundproof door has a RW-value of 32dB, 35dB or 37dB. Doors of the type PC can be used in spaces where you do not want any grooves in the floor (in the case of under-floor heating, for example), or where it is not possible or permissible to drill deep into the floor. The frame section is made of aluminum and is available in anodized aluminum, stainless steel-look or RAL colors. The mountings can be adapted as desired.

CLIP-IN SILENCE DOOR SYSTEMS

1337-01™ / 1337-02™

CLIP-IN SILENCE DOOR SYSTEMS 1337-01™

This designer soundproof door has a RW-value of 37dB. The soundproof pivot door revolves on a floor spring (detail 1337-01-02™ 18). The standard mountings are made of stainless steel. At the top (detail 1337-01™ 6) and bottom (detail 1337-01™ 7), the door has an CLIP-IN groove into which a special noise-resistant seal profile is clipped. This seal profile is also used on the high side of the side-lights (detail 1337-01-02™ 5). The maximum dimensions of the CLIP-IN SILENCE SYSTEMS DOOR 1337-01™ are 1100 x 2700 mm.

CLIP-IN SILENCE DOOR SYSTEMS 1337-02™

This soundproof door, which also has a RW-value of 37dB, has a top panel that distinguishes it from the 1337-01 door. At the top (detail 1337-02™ 9), the door has an CLIP-IN groove into which a special noise-resistant seal profile is clipped. The top light is connected to the side-lights using stainless steel attachment fittings (detail 1337-02™ 16 and 17). The maximum dimensions of the CLIP-IN SILENCE DOOR SYSTEMS 1337-02™ are 1100 x 2500 mm in the case of a maximum wall height of 3000 mm.

SILENCE DOOR SYSTEMS

1338™ / 1739™

SILENCE DOOR SYSTEMS 1338™

This soundproof pivot door, which has a RW-value of 38dB, revolves on a floor spring (detail 1338™ 19). The standard mountings are manufactured from anodized aluminum but can also be supplied in stainless steel-look or in a RAL color. At the top (detail 1338™ 10) and bottom (detail 1338™ 11), the door has a bar. A stainless steel door pull is fitted from bottom bar to top bar.

SILENCE DOOR SYSTEMS 1739™

This soundproof door has a RW-value of 39dB. The door model is identical to the SILENCE DOOR SYSTEMS 1338™ except that the thickness of the glass is different.

SILENCE DOOR SYSTEMS

PC4200™ / PC4700™

SILENCE DOOR SYSTEMS PC4200™ / PC4700™

This soundproof door has a RW-value of 42dB or 47dB, which is unique for its type. This soundproof hinged door model is installed completely flush. The border frames of the glass and the glued metal frame are available in every desirable RAL colour. The door can be combined with double soundproof walls, ranging from RW = 42dB to RW = 60dB and can be designed with a handle lock or door pull.

SILENCE SLIDING DOOR SYSTEMS 1736™

This soundproof sliding door has a RW-value of 36dB, which is unique for a fully-glazed sliding door. This soundproof sliding door rolls on stainless steel wheels over a floor profile; the door also has a guide-rail at the top. The system has a standard stainless steel T-handle. The door can be combined with a soundproof wall: CLIP-IN SILENCE SYSTEMS 1739™, RW = 39dB.

Our world is our shared responsibility and everyone must contribute to the environmental conservation. Both individuals and businesses. Saint-Gobain therefore continually develops energy efficient products, which not only combine comfort and energy savings, but are also produced with respect for the environment.

In three steps we give something back to the environment: in determining our **ecological footprint**, improve it and to devise **eco innovations** for all our (new) products and services throughout their lifecycle.

Saint-Gobain Glass are the first glass manufacturers to have subjected its products to a full **Life Cycle Assessment (LCA)** and there is a very strict environmental strategy control. During the entire lifetime, including the use, these LCA's determine the environmental impact of the glazing produced by Saint-Gobain.

Our LCA's are conducted in accordance with international standards ISO14040 and ISO14044 and examine two important aspects:

- **All phases of the life cycle: from extraction through production, use until the end of durability;**
- All environmental effects generated by the product: CO2 emissions, energy use, water use, air pollution etc.

The LCA is verified by an Environmental Product Declaration (EPD), ensuring the quality and reliability of all calculations.

Visit epd.saint-gobain-glass.com for more information on EPDs.

Greenlite Glass Systems specializes in glass systems for interior and exterior use. In addition to supplying no caulking required and noise-resistant CLIP-IN™ SYSTEMS partitioning glass walls, Greenlite Glass Systems is always willing to contribute its know-how with specific knowledge for fire resistance, noise resistance and security.
